

NutriHelp — QA Regression Report

FE-T2-02

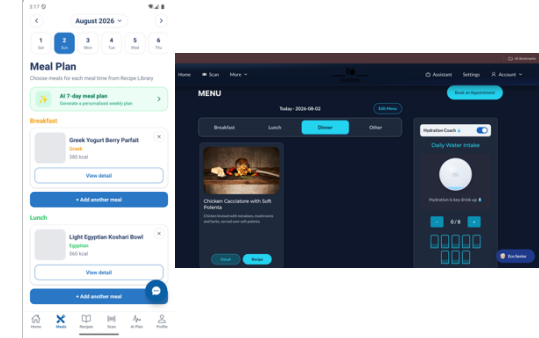

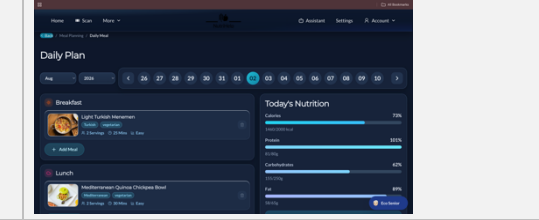

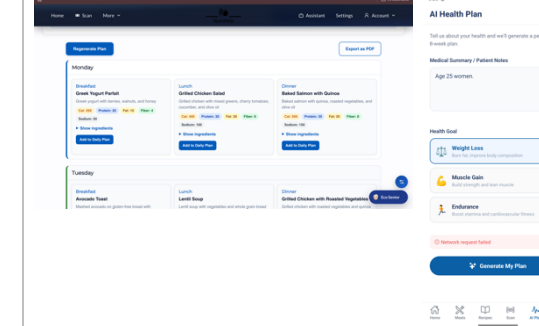

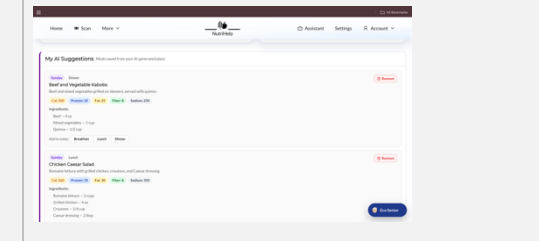

Detailed test cases

1 Auth

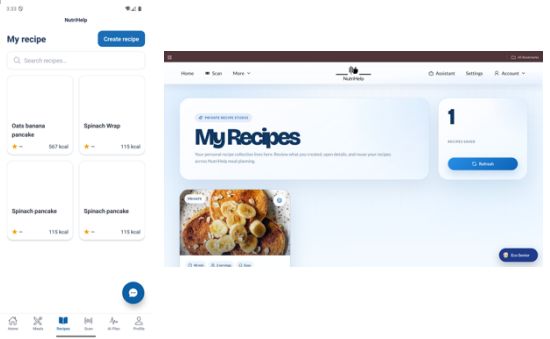

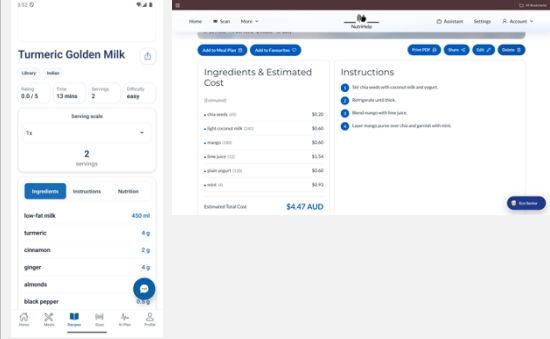

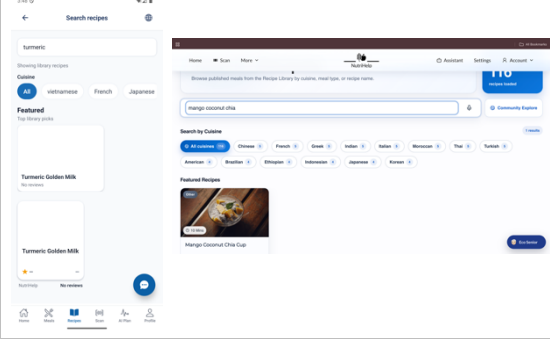

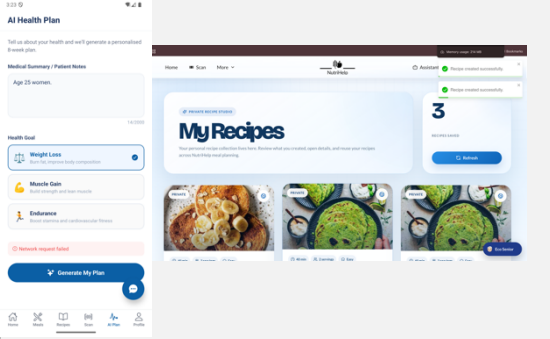

ID	Test case / steps	Expected result	Web	Mobile	Evidence (screenshot)	Notes
AUTH-01	Log in with valid credentials	Authenticated, lands on home/dashboard	Works	Works	 	
AUTH-02	Log in with invalid credentials	Clear error, no access	Works	Works	 	Web : No access without an error
AUTH-03	Create a new account / sign up	Account created, signed in	Broken	Broken	 	Web & mobile : Account can't create Handover-doc mismatch: sign-up was expected to work per the handover/feature set; live testing found account creation broken on both platforms.
AUTH-04	Forgot / reset password	Reset flow completes	Works	Works	 	Mobile: 3-step ForgotPassword flow

ID	Test case / steps	Expected result	Web	Mobile	Evidence (screenshot)	Notes
AUTH-05	Log out	Session ends, returns to login	Works	Works		

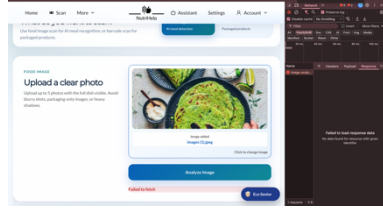

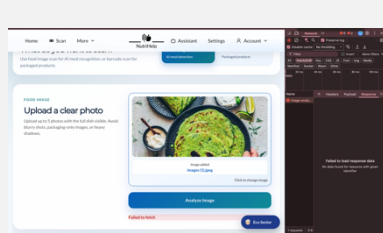

2 Meal Planning

ID	Test case / steps	Expected result	Web	Mobile	Evidence (screenshot)	Notes
MEAL-01	Generate / create a meal plan	Plan produced from preferences	Works	Works		Mobile: meal image preview is not visible
MEAL-02	View daily / weekly plan	Plan displays correctly	Works	Works		Mobile: No specific page for weekly plan
MEAL-03	AI personalised plan flow	Plan generates from inputs	Works	Broken		Mobile: Not working Handover-doc mismatch: AI personalised plan was expected to work; found broken on mobile.
MEAL-04	Save plan and reopen	Saved plan persists	Works	Broken		Mobile: Not working Handover-doc mismatch: save/reopen was expected to persist; found broken on mobile.

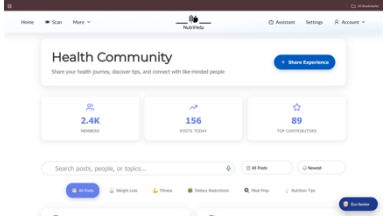

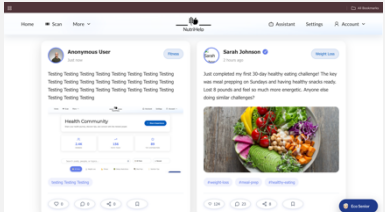

3 Recipes

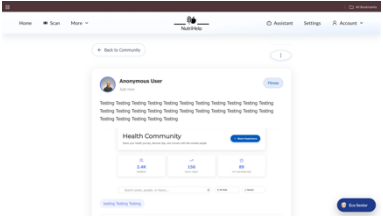

ID	Test case / steps	Expected result	Web	Mobile	Evidence (screenshot)	Notes
REC-01	Browse recipe list	Recipes load	Works	Works		Mobile: Image preview is not visible
REC-02	Open recipe detail	Full recipe shown	Works	Works		Mobile: Image preview is not visible
REC-03	Search / filter recipes	Results match query	Works	Works		
REC-04	Create a recipe	Recipe saved	Works	Broken		Mobile: Not working

4 Scan

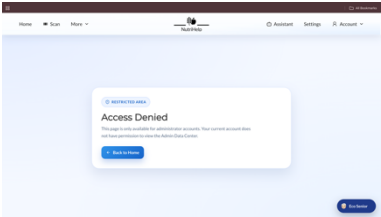

ID	Test case / steps	Expected result	Web	Mobile	Evidence (screenshot)	Notes
SCAN-01	Scan a food / barcode	Item recognised	Broken	Broken	 	Mobile: Scan tab (BarcodeScanner) Handover-doc mismatch: Scan was presented as an available feature; found broken on both platforms.
SCAN-02	View scan result	Nutrition info displayed	Broken	Broken	 	Mobile: ScanProductScreen Handover-doc mismatch: scan-result nutrition display was expected to work; found broken on both platforms.

5 Community

ID	Test case / steps	Expected result	Web	Mobile	Evidence (screenshot)	Notes
COM-01	View community feed	Feed loads	Works	Placeholder		Web page exists and renders but reachable only via the /community URL — no navigation button (screenshots attached). Mobile: CommunityStack is not mounted in any navigator, so Community is unreachable; screens are placeholders (D-01, D-16).
COM-02	Create a post	Post appears in feed	Works	Placeholder		Web reachable only via URL (no button); mobile unreachable placeholder (D-01, D-16).

ID	Test case / steps	Expected result	Web	Mobile	Evidence (screenshot)	Notes
COM-03	Post detail / leaderboard	Content displays	Works	Placeholder		Web reachable only via URL (no button); mobile unreachable placeholder (D-01, D-16).

6 Admin

ID	Test case / steps	Expected result	Web	Mobile	Evidence (screenshot)	Notes
ADM-01	Access admin area	Admin-only access enforced	Works	N/A		Web Admin area exists and renders at /admin but reachable only via the URL — no navigation button (screenshots attached); full admin flows not exercised (no admin credentials). Mobile has no Admin (N/A). (D-16)
ADM-02	Manage users / content	Changes take effect	Not Tested	N/A		Web Admin area exists and renders at /admin but reachable only via the URL — no navigation button (screenshots attached); full admin flows not exercised (no admin credentials). Mobile has no Admin (N/A). (D-16)

Defect log

Candidate items from the code-level review; confirm or reclassify during live testing, and add rows as testing surfaces more.

ID	Area	Severity	Description	Status
D-01	Community (mobile)	High	All Community routes (Feed, Post detail, Create post, Leaderboard) render a shared “Coming soon” placeholder and Community is not in the tab bar - feature not implemented on mobile. Handover implied Community was present on mobile — contradicted (regression). CommunityStack is not mounted in any navigator, so Community is completely unreachable on mobile.	Open
D-02	Community (web)	Medium	Leaderboard “Progress” shows “Progress feature coming soon...” and its fetch is commented out (FitnessJourney.jsx) - incomplete	Open
D-03	Meal Planning (mobile)	Medium	MealStack routes EditDailyPlanScreen and MenuScreen are placeholders - edit-plan and menu flows are stubbed	Open
D-04	Meal Planning (web)	Medium	Shopping List (UI-Only-Pages) uses hardcoded data with TODO “Replace with actual API call when backend is ready” - not backend-wired. Handover doc claimed Shopping List v2 is a “UI-only prototype” — confirmed.	Open
D-05	Scan (web)	Medium	Scan Products lives under UI-Only-Pages/ScanProducts - appears UI-only with no real backend scan; confirm on web	Open / confirm
D-06	Account (mobile)	Medium	Built HealthToolsScreen is misrouted: AccountStack points route “HealthToolsScreen” to the placeholder, so the real screen is unreachable	Open
D-07	Home / Account (mobile)	Low	Several routes are placeholders: HealthNews, HealthNewsDetail, FAQ (Home); DietaryRequirements, ShoppingList, Appointments (Account)	Open
D-08	Meal / Health (mobile)	Medium	NutritionCalculator and HealthTools render hardcoded MOCK data (MOCK_PIE_DATA / MOCK_CALORIE_DATA) instead of the user’s real data	Open
D-09	Config (mobile)	Medium	services/healthPlanApi.js and chatbotApi.js hardcode the backend URL instead of EXPO_PUBLIC_API_BASE_URL used by baseApi — env changes won’t apply to AI plan/chatbot	Open
D-10	Config (mobile)	Medium	.env.example sets EXPO_PUBLIC_AI_MODEL_URL=http://localhost:8000 — AI meal plan and chatbot are unreachable from a device/emulator with the default	Open
D-11	Config (web)	Medium	Many calls default to https://localhost:8443 when REACT_APP_API_BASE_URL is unset (auth, home contact/subscribe, water, chat) — fail outside local dev	Open
D-12	Security / hygiene (mobile)	Low	A Supabase anon JWT is committed in .env.example. Anon keys are public by design, but example files should not carry live keys	Open
D-13	Security / hygiene (web)	Low	Firebase web apiKey is hardcoded in src/utils/firebase.js. Firebase web keys are public by design, but should come from env/config	Open
D-14	Reliability (mobile)	Low	Empty catch blocks swallow errors in HealthConditionsContext, FloatingChatbot/ChatModal and WaterTracker — failures are silent	Open
D-15	Admin (mobile)	Low	No Admin capability on mobile (web-only)	By design / confirm
D-16	Navigation (web)	Medium	Web Community (/community) and Admin (/admin) pages exist and render, but have no navigation links/buttons anywhere in the UI — reachable only by manually entering the URL, so users cannot discover them.	Open
